

Power BI Training Viz 1

Below is an image of an interactive visualization developed using Power BI Desktop free version. This interactive visualization will automatically update with database updates. This is a second visualization that was developed as part of a Power Bi training course by XELPLUS Academy. The data provided is mock sample provided within the training and shows different visualizations reports related to Sales, Budget and Locations (Customer and Store) of imaginary organization “Office Plus”.

Tableau Dashboard and Storytelling

Tableau visualization was prepared using Tableau Public, which is a free version of Tableau.

This is a sample visualization done as a requirement for Tableau visualization certification course. The corresponding data is of sample superstore data, provided in the training course, and the analysis is done to explore relationship between discount and profit, to inform future business decisions for the company. The link to the visualization is here.
